## POTENTIAL BENCHMARK PROGRAM

---

**Category Title:** Expeditionary Medical Operations

**Process or Product Descriptive Title** WRM Data Summary Spreadsheet

**Element Identifier** EX.1.1.1

**Element Title** War Reserve Materiel (WRM) Program Management

**Facility** 60 MDG, Travis AFB

**Unit POC Name** Lt Robert Estep

**Unit POC DSN** 799-7458

**Unit POC E-Mail** robert.estep@60mdg.travis.af.mil

**Background** Medical logistics personnel have to understand, perform and manage their duties throughout 6 main elements or sections in their career field. In a 20-year career they may only complete 2 to 3 years of a medical WRM section. The myriad of daily challenges and requirements sometimes makes it difficult to view, manage and execute all WRM programs simultaneously. This could be accomplished by providing medical logistics personnel the ability to see almost the entire program in a single spreadsheet.

**Method** In order to increase visibility, management and execution of the medical WRM assets and programs, a 60 MDG WRM information spreadsheet was created. The spreadsheet will allow the simultaneous review of the medical equipment UTC, WRM allowance standard code, WRM project code, assets due-ins, centrally managed equipment shortages, critical and total items, critical and total availability percentages, historical status, pending procurement dollars, deployment status and a timeline to "get well" for each project.

**Conclusion** Medical logistics personnel, commanders, and other senior leadership and staff reported this spreadsheet was very beneficial, effective and useful in obtaining an operational overview of the large medical WRM program in the 60 MDG. The spreadsheet also provides the ability to ensure and verify the Air Force medical readiness decision support system (MRDSS) and the AEF reporting tool (ART) are presenting accurate data to senior leaders at the squadron, group, wing,
